

# European Green Crab Removal

This year and since 2023, we have continued our early detection and monitoring work against this invasive species to protect the native life and eelgrass habitats of our local waters.

From May to September, we performed monthly trapping sessions at 6 different sites.

**NEW! Snorkelling Removal**  
Partnering with Bottom Dwellers, we started a snorkelling removal program to build capacity for the detection and mitigation of EGC invasions.
