

Moving Forward

With a big 2026 ahead, Peninsula Streams Society is committed to continuing the work we've been doing since 2002, to **build a legacy of healthy streams and shorelines**. Some of our priorities next year are:

ALIGN our strategic frameworks to ensure our impact is formally framed within UN Sustainable Development Goals (SDGs) for all policy-facing documentation.

RESTORE

With a special focus on Colquitz River Mainstem Restoration, Ten-Ten Creek Restoration, and Nymph Point Park Ecocultural Shoreline Restoration.

MONITOR

Implementing regional, data-backed monitoring to ensure conservation and restoration efforts are targeted where they will have the highest ecological impact.

MITIGATE

The impacts of 6PPD-Q* and urban stormwater on local watersheds.

SUPPORT

Our change in leadership, ensuring a seamless transition in the summer to a new Executive Director.

*6PPD-quinone (6PPD-Q) is a toxic chemical byproduct that comes from car tires—and it's become a major environmental concern, especially for aquatic life.
