

## WHAT WE DID

We restored the natural functioning of watersheds and shorelines by:

- Reconnecting fragmented salmon habitat
- Expanding and enhancing spawning and rearing salmon habitat
- Rebuilding degraded streams and wetlands
- Restoring riparian and estuarine ecosystems
- Removing invasive species and replanting native vegetation

*In 2025, the KENNES Watershed Restoration Project at MÁWUEĆ reached a major milestone with the completion of the first 10,000 m<sup>2</sup> of restoration toward our 15,000 m<sup>2</sup> goal by 2028.*
